### Intersection Summary

|            |       |
|------------|-------|
| Area Type: | Other |
|------------|-------|

Cycle Length: 89

Actuated Cycle Length: 75.7

Natural Cycle: 90

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.91

Intersection Signal Delay: 36.7

Intersection Capacity Utilization 81.0%

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 3: Chestnut Street & Elliot Street

a Volume to capacity ratio.

b Average total delay, in seconds per vehicle.

c Level-of-service.

d 50th percentile queue, in feet.

e 95th percentile queue, in feet.

~ Volume exceeds capacity, queue is theoretically infinite.

# 95th percentile volume exceeds capacity, queue may be longer.

#### Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 103.5

Natural Cycle: 130

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.94

Intersection Signal Delay: 41.7

Intersection LOS: D

Intersection Capacity Utilization 81.5%

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 3: Chestnut Street & Elliot Street

#### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 102

Natural Cycle: 100

Control Type: Semi Act-Uncoord

Maximum v/c Ratio: 0.95

Intersection Signal Delay: 38.5

Intersection LOS: D

Intersection Capacity Utilization 100.2%

ICU Level of Service G

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 17: Centre Street & Walnut Street

#### Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 104.8

Natural Cycle: 150

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.02

Intersection Signal Delay: 48.0

Intersection LOS: D

Intersection Capacity Utilization 95.6%

ICU Level of Service F

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 3: Chestnut Street & Elliot Street

#### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 101.8

Natural Cycle: 110

Control Type: Semi Act-Uncoord

Maximum v/c Ratio: 0.98

Intersection Signal Delay: 40.4

Intersection LOS: D

Intersection Capacity Utilization 93.1%

ICU Level of Service F

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 17: Centre Street & Walnut Street

#### Intersection Summary

Area Type: Other

Cycle Length: 100

Actuated Cycle Length: 77.7

Natural Cycle: 90

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.87

Intersection Signal Delay: 34.1

Intersection LOS: C

Intersection Capacity Utilization 80.6%

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 3: Chestnut Street & Elliot Street

#### Intersection Summary

Area Type: Other

Cycle Length: 90

Actuated Cycle Length: 74.6

Natural Cycle: 90

Control Type: Semi Act-Uncoord

Maximum v/c Ratio: 0.80

Intersection Signal Delay: 25.4

Intersection LOS: C

Intersection Capacity Utilization 80.9%

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 17: Centre Street & Walnut Street

#### Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 103.8

Natural Cycle: 130

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.94

Intersection Signal Delay: 42.4

Intersection LOS: D

Intersection Capacity Utilization 82.2%

ICU Level of Service E

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 3: Chestnut Street & Elliot Street

#### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 102

Natural Cycle: 110

Control Type: Semi Act-Uncoord

Maximum v/c Ratio: 0.97

Intersection Signal Delay: 40.1

Intersection LOS: D

Intersection Capacity Utilization 101.0%

ICU Level of Service G

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 17: Centre Street & Walnut Street

#### Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 104.8

Natural Cycle: 150

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.02

Intersection Signal Delay: 48.0

Intersection LOS: D

Intersection Capacity Utilization 95.7%

ICU Level of Service F

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 3: Chestnut Street & Elliot Street

|                                                                                     |                                                                                     |                                                                                       |

#### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 101.8

Natural Cycle: 110

Control Type: Semi Act-Uncoord

Maximum v/c Ratio: 0.98

Intersection Signal Delay: 41.0

Intersection LOS: D

Intersection Capacity Utilization 93.9%

ICU Level of Service F

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 17: Centre Street & Walnut Street

#### Intersection Summary

Area Type: Other

Cycle Length: 100

Actuated Cycle Length: 78

Natural Cycle: 90

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.87

Intersection Signal Delay: 34.4

Intersection LOS: C

Intersection Capacity Utilization 81.0%

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 3: Chestnut Street & Elliot Street

## Appendix B

- Shared Parking Analysis

## Memorandum

To: Mr. Barney Heath  
Director of Planning

Date: October 12, 2018

Project #: 12239.00

From: VHB, Inc.

Re: The Northland Newton Development  
Right-Sized Parking

This memorandum presents an evaluation of the parking for the proposed mixed-use development project on Needham Street. One of the project design goals is to reduce reliance on personal automobile use. Parking management is an effective tool in influencing travel behavior. Right-sizing the parking supply balances the parking needs of the project while minimizing not only the physical footprint of parking, but also the number of motor vehicle trips that excess parking can incentivize.

The objective of this evaluation is to understand how to minimize the amount of parking while meeting the needs of the project residents, workers, customers, and visitors. The evaluation looks at opportunities for sharing parking among uses that have peak parking demand occurring at different times of day and days of the week.

### Project Description

The project consists of reuse of the mill building at 156 Oak Street as office space and new construction of residential and commercial space. The expected or possible uses within the project consist of the following.

- 822 residential units
- 180,000 of office space
- 105,200 SF of retail space
- 50,000 SF of restaurant space<sup>1</sup>
- 10,000 SF of medical office<sup>1</sup>
- 20,000 SF of health club<sup>1</sup>
- 4,000 SF of community space

### Zoning Requirements

The parking-related Development Standards (Article 5) in Newton's zoning ordinance set forth the minimum number of parking stalls to be supplied for each type of building or land use. The Development Standards also acknowledge that lesser parking is needed when there are multiple uses. The Development Standards include the ability to reduce parking requirements in cases "of a combination, in a single integrated development, of 3 or more uses ...".

---

<sup>1</sup> These allocations of restaurant, medical and health club uses are likely to be high in each case but are presented to create an expected "worst case" scenario regarding commercial parking demand.

**Table 1** shows the minimum parking requirements for each individual use and the number of parking spaces based on those requirements. The gross parking requirement, without consideration of shared parking or other parking management strategies, is 3,409 spaces.

**Table 1 – Parking Requirements per Zoning – Standalone Uses**

| Use            | Size          | Parking Ratio per Zoning                                                             | No. of Spaces |
|----------------|---------------|--------------------------------------------------------------------------------------|---------------|
| Residential    | 822 units     | 2 spaces per unit                                                                    | 1,644         |
| Retail         | 105,200 sf *  | 1 space per 300 sf, plus 1 per every 3 employees in largest shift                    | 417           |
| Restaurant     | 50,000 sf **  | 1 space per 3 patron seats, plus 1 per every 3 employees in largest shift            | 581           |
| Medical Office | 10,000 sf     | 5 spaces per 1,000 sf                                                                | 50            |
| Health Club    | 20,000 sf *** | 1 space per 150 sf, plus 1 per every 3 employees in largest shift                    | 142           |
| Office         | 180,000 sf    | 4.0 spaces per 1,000 sf for first 20,000 sf, plus 3.0 per 1,000 sf for additional sf | 560           |
| Community      | 4,000 sf **** | 1 space per 300 sf, plus 1 per every 3 employees in largest shift                    | <u>15</u>     |
|                |               |                                                                                      | <b>3,409</b>  |

\* Estimated 200 employees

\*\* Estimated 1,595 seats and 148 employees

\*\*\* Estimated 24 employees

\*\*\*\* Estimated 3 employees

## Right-Sized Parking Needs

A mixed-use project such as the proposed development needs less parking than that calculated assuming standalone uses. The amount of parking should be reduced to account for several factors, including typical vacancies, the sharing of parking among different uses, and incentives to reduce commuting by personal automobile. It is important to account for these factors and “right-size” the site parking not only to minimize the land and building area used for parking, but also to prevent excess parking from encouraging unnecessary vehicle use.

Two key elements of the parking management strategy are providing only one parking space per dwelling unit and providing a large centralized parking area shared among a variety of users.

## Residential Parking

Parking for residents of the project would average one parking space for each of the 822 dwelling units. This is consistent with the target metric of one car per household set in the *Newton 2040* transportation strategy<sup>2</sup> and reflects general trends towards lower automobile ownership as access expands for other transportation options such as bicycling, transit, and on-demand ride services. Also, Northland expects to charge separately for residential parking to create disincentives for car ownership.

## Shared Parking

The Building 6 parking garage will contain approximately 1,125 parking spaces. It will be the primary parking location for office employees (Building 1) and for retail customers and employees. Sharing this common parking supply allows the amount of parking to be reduced as, for example, restaurant and retail use peaks on evenings and weekends when office use is low.

**Table 2** shows the overall peak parking demand for the project, assuming parking is shared among commercial uses. Results are summarized for the peak parking demand on weekdays and weekends. The project's peak parking demand is 1,884 spaces and occurs on weekdays.

**Table 2 – Peak Parking Demand – Shared Parking**

| Use                     | Size       | Shared Parking Demand<br>(weekday midday) | Shared Parking Demand<br>(weekend evening) |
|-------------------------|------------|-------------------------------------------|--------------------------------------------|

\* Residential parking areas assumed to be used only by residents and not shared with commercial tenants/visitors/customers.

<sup>2</sup> *Newton 2040: A Transportation Strategy for Newton*

The calculation of the project's shared parking demand follows the methods outlined by the Urban Land Institute (ULI), the National Parking Association (NPA), and the Institute of Transportation Engineers (ITE). The calculation involves several factors, the first of which is to determine whether all of the parking supply can, in fact, be shared. In this case, much of the residential parking is scattered among small garages under residential buildings and would likely require assigning specific users (such as those from a smaller office tenant) if those residential spaces were to be shared with others. Therefore, to be conservative with the parking demand calculation summarized in Table 2, the residential parking is considered to be used only by residential parkers.

The shared parking calculation then takes into account any atypical mode share by users resulting from transportation demand measures. In this case, the automobile mode share for office workers is assumed to be 60 percent, consistent with the analyses of the "robust shuttle service" scenario presented in the traffic analysis. To be conservative, the mode share adjustment is applied only to office workers and not to retail and restaurant workers.

The shared parking calculation also considers trips are wholly internal to the project. For example, some of the retail and restaurant patrons are those who live or work on site and therefore the retail component of the project does not need to provide parking for them since their cars are already parked at the residence or office. For this calculation, an internal capture rate of 20% is used. That is, when parking space usage is at its peak, 20 percent of retail/restaurant patrons are those living or working on site. This adjustment applies to patrons only and not to employees. The 20 percent figure is consistent with that calculated for the traffic assessment.

The last element of the shared parking calculation is consideration of the temporal differences among various parkers. The ULI and ITE provide information about hourly, daily, and monthly parking demand patterns for each of the project uses. The temporal data differentiate between parking occupancy patterns of customers and visitors versus employees.

## **Conclusion**

The analysis of shared parking potential for the project identifies a peak parking need of 1,884 parking spaces. This analysis assumes an upper-range estimate of high-activity parking uses such as restaurants and medical offices, and also assumes that residential parking is not shared with commercial parkers.

The peak parking demand of 1,884 parking spaces is 69 spaces fewer than the proposed parking supply of 1,953 spaces. The difference is less than one half of one percent and the proposed parking supply is appropriate to meet the project's objective of providing for the parking needs of the residents, workers, customers, and visitors without excess parking that encourages more vehicle use.
