| Instructions on how to observe and measure ISD and SSD are included on subsequent pages.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |                          |                     | Refer to AASHTO for specific guidance on SSD and ISD if presented with an unusual/atypical case.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |            |  |  |
| <p><b>ISD</b> - Intersection sight distance is the distance that is based on the time required for perception, reaction and completion of the desired critical exiting maneuver [typically, a left turn] once the driver on a minor street approach [or a site drive] decides to execute the maneuver. Calculation for the critical ISD includes the time to [1] turn left, and to clear the near half of the intersection without conflicting with the vehicles approaching from the left; and [2] upon turning left, to accelerate to the operating speed on the roadway without causing approaching vehicles on the main road to unduly reduce their speed. In this context, ISD can be considered as a <i>desirable</i> visibility criterion for the safe operation of an unsignalized intersection.</p> <p><b>SSD</b> - Stopping sight distance is the distance required for a vehicle approaching an intersection from either direction to perceive, react, and come to a complete stop before colliding with the exiting vehicle from a driveway. In this respect, SSD can be considered as the <i>minimum</i> visibility criterion for the safe operation of an unsignalized intersection.</p> |  |                          |                     | <p>Adequate ISD is not needed at signalized intersections, assuming traffic signal heads are visible on all approaches. Any object that would obstruct the driver's view should be removed or lowered, if practical. Such objects include buildings, parked cars, highway structures, hedges/vegetation/trees/bushes/unmowed lawn, walls, fences, and terrain.</p> <p>For ISD, an object should be considered an obstruction if it obstructs the vision of a driver whose eye height is 3.5 feet above the roadway surface and the object to be seen is 3.5 feet above the surface of the intersecting road.</p> <p>Where horizontal sight restrictions occur on downgrades, particularly at the ends of long downgrades, it is desirable to provide SSD that exceeds those values indicated above (refer to page 114 of AASHTO).</p> |  |            |  |  |
| <p><b>Limiting Factors:</b></p> <p><b>Observed ISD:</b> 420 looking left [south] horizontal curve<br/>           (rounded to nearest 5 feet) 330 looking right [north] horizontal curve</p> <p><b>Observed SSD:</b> 435 traveling NB horizontal curve<br/>           (rounded to nearest 5 feet) 400 traveling SB horizontal curve</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |                          |                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |            |  |  |

# Stopping Sight Distance and Intersection Sight Distance Calculator [v0.97]

## Based on 'A Policy on Geometric Design of Highways and Streets', AASHTO, 2004

| Section I                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |                           |                     | Section III                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |  |

| Instructions on how to observe and measure ISD and SSD are included on subsequent pages.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |                           |                     | Refer to AASHTO for specific guidance on SSD and ISD if presented with an unusual/atypical case.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |
| <p><b>ISD</b> - Intersection sight distance is the distance that is based on the time required for perception, reaction and completion of the desired critical exiting maneuver [typically, a left turn] once the driver on a minor street approach [or a side drive] decides to execute the maneuver. Calculation for the critical ISD includes the time to [1] turn left, and to clear the near half of the intersection without conflicting with the vehicles approaching from the left; and [2] upon turning left, to accelerate to the operating speed on the roadway without causing approaching vehicles on the main road to unduly reduce their speed. In this context, ISD can be considered as a <i>desirable</i> visibility criterion for the safe operation of an unsignalized intersection.</p> <p><b>SSD</b> - Stopping sight distance is the distance required for a vehicle approaching an intersection from either direction to perceive, react, and come to a complete stop before colliding with the exiting vehicle from a driveway. In this respect, SSD can be considered as the <i>minimum</i> visibility criterion for the safe operation of an unsignalized intersection.</p> |  |                           |                     | <p>Adequate ISD is not needed at signalized intersections, assuming traffic signal heads are visible on all approaches. Any object that would obstruct the driver's view should be removed or lowered, if practical. Such objects include buildings, parked cars, highway structures, hedges/vegetation/trees/bushes/unmowed lawn, walls, fences, and terrain.</p> <p>For ISD, an object should be considered an obstruction if it obstructs the vision of a driver whose eye height is 3.5 feet above the roadway surface and the object to be seen is 3.5 feet above the surface of the intersecting road.</p> <p>Where horizontal sight restrictions occur on downgrades, particularly at the ends of long downgrades, it is desirable to provide SSD that exceeds those values indicated above (refer to page 114 of AASHTO).</p> |  |  |  |

a Volume to capacity ratio.

b Average total delay, in seconds per vehicle.

c Level-of-service.

d 50th percentile queue, in feet.

e 95th percentile queue, in feet.

~ Volume exceeds capacity, queue is theoretically infinite.

# 95th percentile volume exceeds capacity, queue may be longer.

- a Volume to capacity ratio.  
b Average total delay, in seconds per vehicle.  
c Level-of-service.  
d 50th percentile queue, in feet.  
e 95th percentile queue, in feet.  
~ Volume exceeds capacity, queue is theoretically infinite.  
# 95th percentile volume exceeds capacity, queue may be longer.

- a Volume to capacity ratio.  
b Average total delay, in seconds per vehicle.  
c Level-of-service.  
d 50th percentile queue, in feet.  
e 95th percentile queue, in feet.  
# 95th percentile volume exceeds capacity, queue may be longer.

a Volume to capacity ratio.

b Average total delay, in seconds per vehicle.

c Level-of-service.

d 50th percentile queue, in feet.

e 95th percentile queue, in feet.

# 95th percentile volume exceeds capacity, queue may be longer.

a Volume to capacity ratio.

b Average total delay, in seconds per vehicle.

c Level-of-service.

d 50th percentile queue, in feet.

e 95th percentile queue, in feet.

~ Volume exceeds capacity, queue is theoretically infinite.

# 95th percentile volume exceeds capacity, queue may be longer.

a Volume to capacity ratio.

b Average total delay, in seconds per vehicle.

c Level-of-service.

d 50th percentile queue, in feet.

e 95th percentile queue, in feet.

~ Volume exceeds capacity, queue is theoretically infinite.

# 95th percentile volume exceeds capacity, queue may be longer.

- a Volume to capacity ratio.  
b Average total delay, in seconds per vehicle.  
c Level-of-service.  
d 50th percentile queue, in feet.  
e 95th percentile queue, in feet.  
~ Volume exceeds capacity, queue is theoretically infinite.  
# 95th percentile volume exceeds capacity, queue may be longer.

- a Volume to capacity ratio.  
b Average total delay, in seconds per vehicle.  
c Level-of-service.  
d 50th percentile queue, in feet.  
e 95th percentile queue, in feet.  
~ Volume exceeds capacity, queue is theoretically infinite.  
# 95th percentile volume exceeds capacity, queue may be longer.  
dl Defacto Left Lane

- a Volume to capacity ratio.  
b Average total delay, in seconds per vehicle.  
c Level-of-service.  
d 50th percentile queue, in feet.  
e 95th percentile queue, in feet.  
# 95th percentile volume exceeds capacity, queue may be longer.

## Intersection Summary

Area Type: Other

Cycle Length: 158

Actuated Cycle Length: 158

Natural Cycle: 145

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.31

Intersection Signal Delay: 69.1

Intersection LOS: E

Intersection Capacity Utilization 81.6%

ICU Level of Service D

Analysis Period (min) 15

- Volume exceeds capacity, queue is theoretically infinite.

- Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

- Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Area Type: Other  
Cycle Length: 115  
Actuated Cycle Length: 115  
Offset: 8 (7%), Referenced to phase 2:EBTL, Start of Green  
Natural Cycle: 60  
Control Type: Actuated-Coordinated  
Maximum v/c Ratio: 0.74  
Intersection Signal Delay: 20.5  
Intersection Capacity Utilization 70.5%  
Analysis Period (min) 15

Splits and Phases: 18: Nahanton Street & Winchester Street

Intersection Summary

Area Type: Other  
Cycle Length: 91  
Actuated Cycle Length: 77.8  
Natural Cycle: 60  
Control Type: Actuated-Uncoordinated  
Maximum v/c Ratio: 0.79  
Intersection Signal Delay: 17.4  
Intersection Capacity Utilization 82.7%  
Analysis Period (min) 15  
# 95th percentile volume exceeds capacity, queue may be longer.  
Queue shown is maximum after two cycles.

Splits and Phases: 19: Wells Avenue/JCC Driveway & Nahanton Street

Intersection Summary

Area Type: Other

Cycle Length: 96

Actuated Cycle Length: 55.9

Natural Cycle: 70

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.72

Intersection Signal Delay: 16.3

Intersection LOS: B

Intersection Capacity Utilization 68.7%

ICU Level of Service C

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 4: Oak Street & Chestnut Street

| Intersection Signal Delay:         | 43.4                                                            |
| Intersection Capacity Utilization: | 73.1%                                                           |
| Analysis Period (min):             | 15                                                              |
| #                                  | 95th percentile volume exceeds capacity, queue may be longer.   |
|                                    | Queue shown is maximum after two cycles.                        |
| m                                  | Volume for 95th percentile queue is metered by upstream signal. |

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.
